

WALK IN BATHTUBS

Home Living Solutions A better environment for living.

Here at Home Living Solutions, we recognize the importance of maintaining and protecting our environment. That's why we recently became involved with Florida's Showcase Green Envirohome™. Home Living Solutions walk in bathtubs are part of the Whole House Graywater Reuse System integrated throughout the project. Graywater, including water from the bathtub, sinks and laundry can be reused in other areas of the home such as the flushing of toilets. This helps to preserve one of our most precious resources—clean water.

Air quality is also maintained because the jets in a Home Living Solutions walk in tub have been designed so that water does not stagnate, eliminating mold spores that frequently become airborne. To further improve air quality and reduce energy consumption, a Syllent™ motor is part of the whirlpool system. It re-circulates bath water around the Syllent™ motor so the water takes on the heat of the motor while cooling it. Not only does this eliminate the need for a separate water heater to maintain bath temperature, it also eliminates the need for a cooling fan that typically stirs up particles in the air and creates noise pollution.

In addition, because Home Living Solutions tubs are made from highly durable materials including a steel frame and solid, single piece construction with a limited lifetime warranty, durability and sustainability are enhanced.

We urge everyone to conserve valuable resources whenever and wherever possible. Because it is often the little contributions that make a big difference.
